Implement House price Prediction using appropriate machine learning algorithm

CODE :

```
import numpy as np

X = np.array([
    [1000, 2],
    [1200, 2],
    [1500, 3],
    [1800, 3],
    [2000, 4]
])

y = np.array([50, 60, 75, 90, 100])

X = np.c_[np.ones(len(X)), X]

w = np.linalg.pinv(X) @ y

new_house = np.array([1, 1600, 3])

# Predict price

price = new_house @ w

print("Predicted House Price:", round(price, 2), "Lakhs")
```

OUTPUT

```
Predicted House Price: 80.0 Lakhs
```

```
=== Code Execution Successful ===
```
