Implement Mobile Price Prediction using appropriate machine learning algorithm

CODE :

```
import numpy as np

# Features: RAM(GB), Storage(GB)
X = np.array([
    [2, 32],
    [4, 64],
    [4, 128],
    [6, 128],
    [8, 256]
])

# Price in thousands
y = np.array([10, 15, 20, 25, 35])
X = np.c_[np.ones(len(X)), X]

# Train model
w = np.linalg.pinv(X) @ y

new_mobile = np.array([1, 6, 128])
price = new_mobile @ w

print("Predicted Mobile Price:", round(price, 2), "Thousand")
```

OUTPUT

```
Predicted Mobile Price: 23.99 Thousand
```

```
=== Code Execution Successful ===
```
